DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-27 are rejected under 35 U.S.C. 102(e) as being anticipated by Ferencz et al.

Ferencz et al. teach providing a source of fibers ; electrostatically charging the fibers with an electrostatic unit, and the electrostatic unit includes an array of pins or protrusions; collecting the fibers on a forming surface to form a non-woven web. The method as claimed as well as the apparatus and the product of the process are anticipated fully by Ferencz et al.

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise

extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-27 are provisionally rejected under the judicially

created doctrine of obviousness-type double patenting as being

unpatentable over claims 1-15 of copending Application No.

10/325,140. Although the conflicting claims are not identical, they are

not patentably distinct from each other because both the instant

application and that of the '140 application provide a source of fibers

which is subjected to an electrostatic charge using a pin or protrusion

array, which is then collected on a forming surface to form a non-

woven web. The claims in the instant application are broader in scope

than the '140 application and to selective charge pins and vary the

charge level would have been obvious to one having ordinary skill in the art when electrostatic charging has been broadly taught.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

5. Claims 1-27 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-26 of copending Application No. 10/687,006. Although the conflicting claims are not identical, they are not patentably distinct from each other because both the instant application and that of the '006 application provide a source of fibers which is subjected to an electrostatic charge using a pin or protrusion array, which is then collected on a forming surface to form a non-woven web. The claims in the instant application are broader in scope than the '006 application and to provide a deflecting device would have been obvious to one having ordinary skill in the art because both applications are drafted with "comprising" language which is open language which opens the claims to the elimination or inclusion of a means plus function. In the instant application, claim 7 and 21, adds a

deflecting device to the method and apparatus which would then directly provide the invention as claimed.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
